ClassSaga: A Gamified Classroom Incentive System

Ariel Tang

Advisor: Dr. Michael Soltys

Abstract:

In K-12 education, students often experience a lack of motivation and engagement in their academic work. ClassSaga is a full-stack web application developed with React, Node.js, Express, and MongoDB that introduces a virtual pet incentive system designed to encourage positive student behaviors. Teachers award points based on classroom performance, which students can then use to care for and enhance their virtual pets. The application incorporates core features such as pet care mechanics, a shop with purchasable items, and a leveling system that ties academic participation to in-game progression. ClassSaga is intentionally designed as a fun yet lightweight tool that promotes engagement and student buy-in without significantly disrupting instructional time. By integrating gamification with classroom management, the system aims to reinforce desired behaviors through consistent feedback and interactive progression.

5pm - 6pm, Monday, May 18th, 2026
