

ClassSaga - A Gamified Classroom Incentive System

COMP 596
Ariel Tang

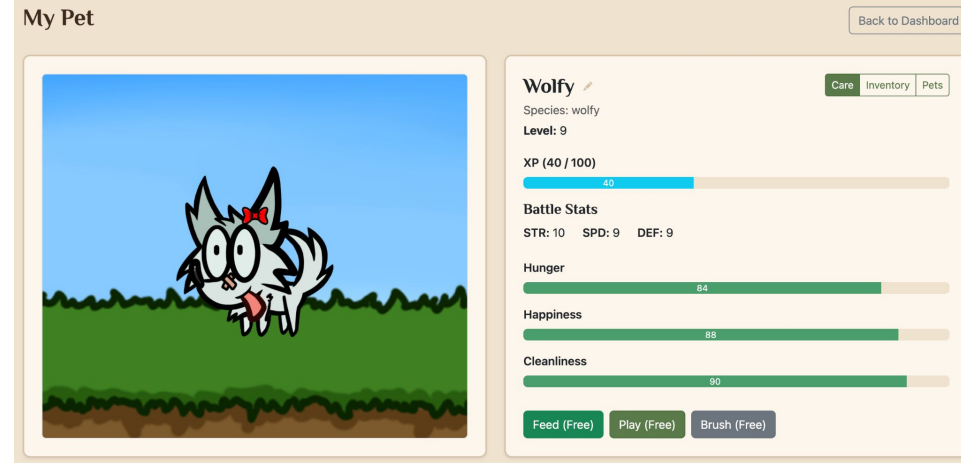

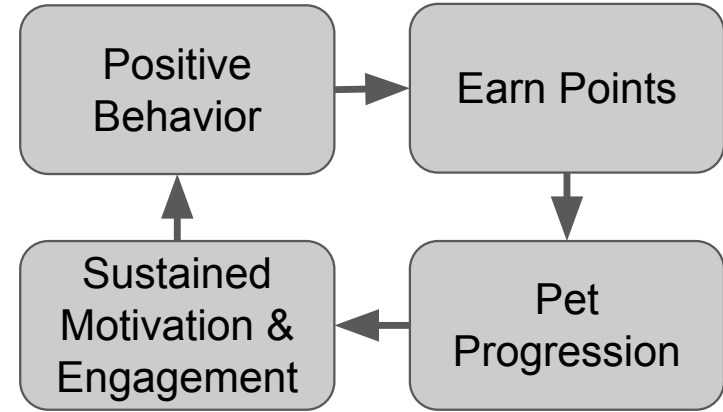

Problem to Solve

- Students struggle with motivation, engagement, and consistent academic participation
- Existing systems:
 - behavior tracking or simple reward economies
 - lack progression and personalization
 - can be difficult to maintain consistently
- **Need for a lightweight, student-centered approach to positive reinforcement**

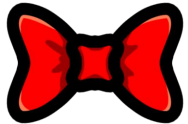

Proposed Solution

- Gamified classroom incentive platform
- Rewards for positive classroom behaviors
- Points for care and customization of pet
- Progression system encourages long-term engagement
- short, intentional sessions

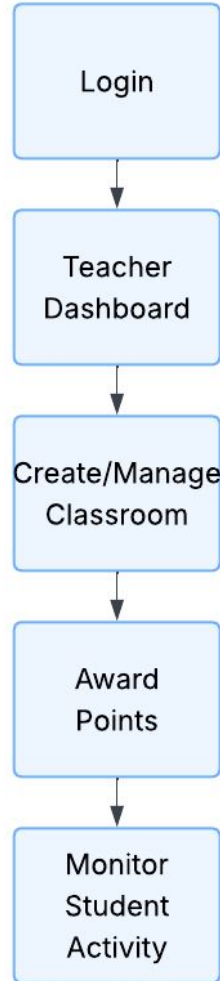

Key Features

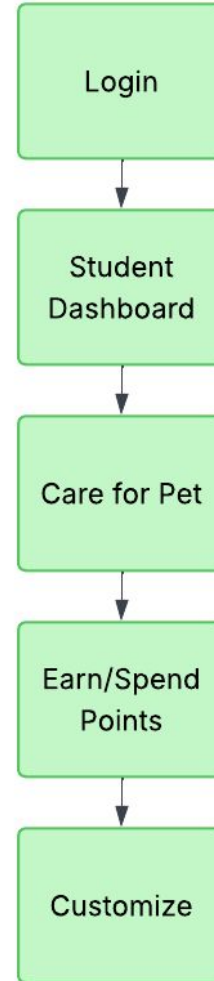

Classroom Management	Virtual Pet System
• Teacher created classrooms • Student enrollment & management • Individual, group, or classwide points	• Starter pet selection • Pet care • Level progression and stat growth • Daily battle system
Economy & Customization	Activity & Feedback
• Point-based reward economy • Shop with consumables, cosmetics, and pets • Inventory management and equipment	• Real time interaction feedback • Pet animations • Student and classroom activity tracking

Teacher User Flow

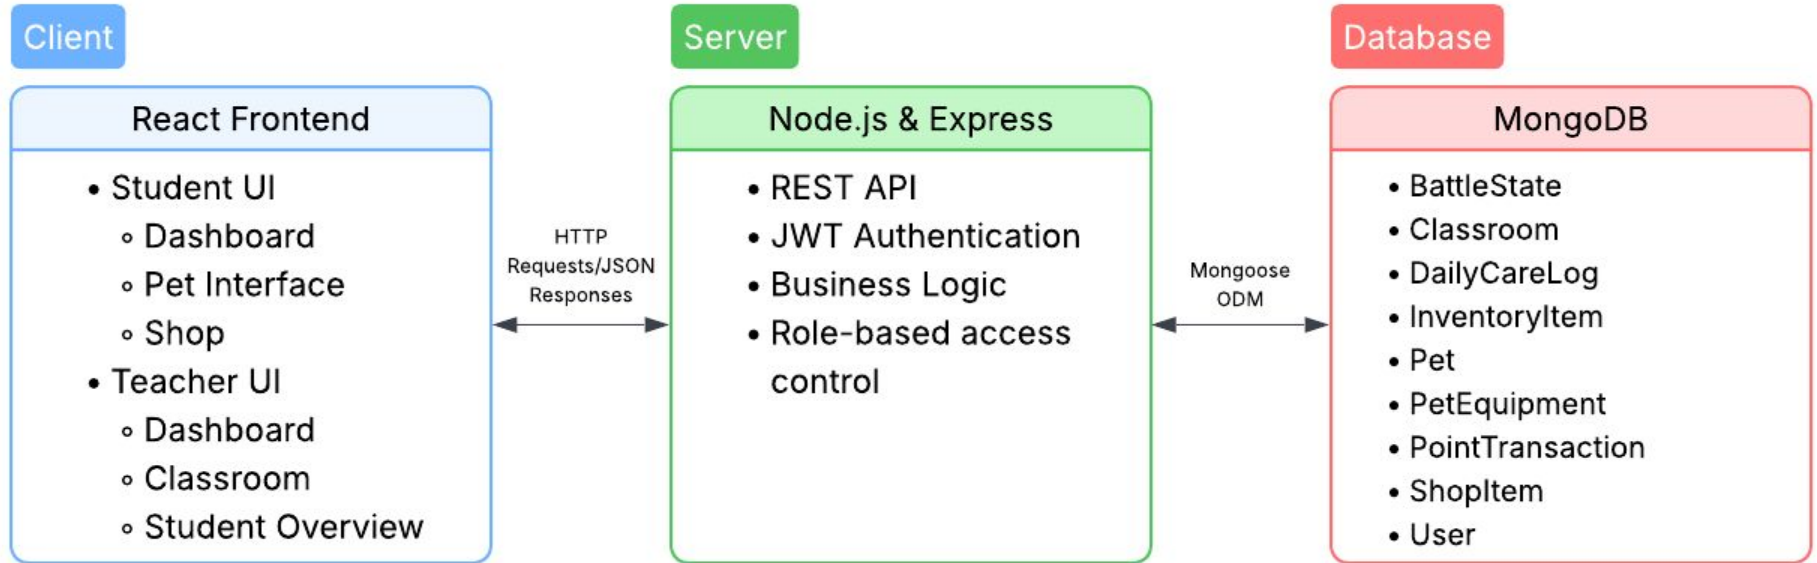

Student User Flow

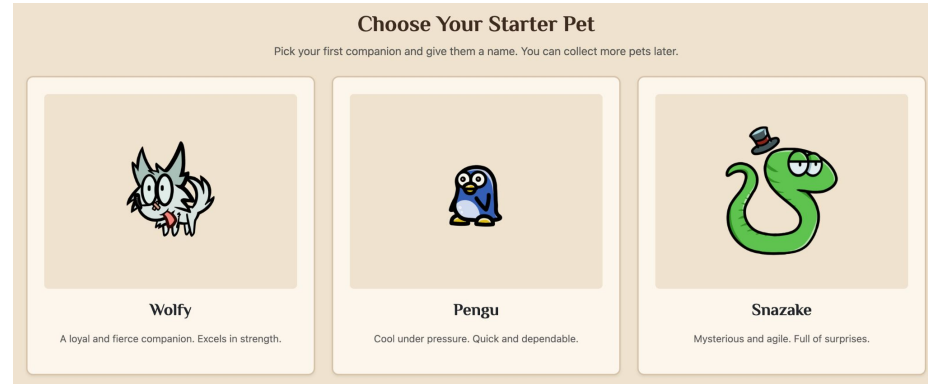

Primary User Flow

System Overview

Key Design Decisions

- Flexible Data Modeling
 - Separate pets, inventory, shop items, and transactions
- Lightweight Gamification
 - Keep interactions short and low complexity
- Positive Reinforcement & Student Autonomy
 - Rewards engagement rather than penalizing disengagement

Known Limitations

- No LMS Integration
 - Manual student and point management
- Limited Persistent Game State
 - Pet activity log locally stored
- No admin interface
 - Content management limitation
- Limited Mobile Optimization
 - Further testing and optimization required

Live Demo

Future Improvements

- Platform integration with Canvas and Google Classroom
- Achievements
- More customization options
- Pet evolution system
- Daily quest/reward
- Multiplayer (whole class) events
- Mobile-optimized layout

Conclusion

- Applies gamification to classroom motivation through a virtual pet reward system
- Combines educational goals with full-stack application design
- Architecture supports future feature expansion and continued development
